

YANIV TENZER

PhD Statistics | Testing, Measurement and
Evaluation Expert

PROFILE

A data scientist and machine learning expert, specializing in measurement and evaluation. My work focuses two facets: (i) a quantitative users-centric research, aimed at equipping companies with a well-established understating of users' behaviour, preferences, decision making and (ii) business centric research where the focus is on growth and evaluation of business performance. I integrate advanced statistical and machine learning tools with real-world applications, designing frameworks and evaluation methodology that transform complex data into actionable insights and drive sustainable growth.

EXPERIENCE

Research Associate, Faculty of Computer Science | Technion | 2024–Current

- Developing cutting-edge measurement and evaluation methodology.
- My work is focused on the derivation of modern measurement and evaluation procedures (i.e., A/B testings) that leverage recent advances in the field of ML
- Collaborating with faculty members and co-supervising PhD students in the fields of statistics and data-science

Senior Quantitative Researcher & Growth Data-Science Tech Lead (level 6) | Meta | 2021–2024

- Leading data-driven growth project, which resulted in an increase in the percentage of users (+9% incremental Monthly-Active-Users).
- Acts as a researcher in behavioral science, improving customer service through creative surveys that specify and measure behavior patterns and expose profound conclusions, both psychological and statistical, that have influenced Meta's product launches, features and product design.
- Two-sided communication with the different functions
- Building optimal methods for analysis whilst utilizing a range of data sources to provide growth and concrete solutions for user experience.

Head of Data-Science, Lightricks LTD | 2017– 2021

Member of the company's executive team and the leading architect in the Growth Marketing field.

Directing the company's marketing efforts through the development and implementation of testing methodologies (i.e., A/B testing and Multi-Armed-Bandith approaches)

- construction and architecture 'Life Time Value' and creator of the optimal payment method for users, using subscriptions instead of onetime payments.
- Partner to all strategic decision-making, driven by research and data that have led to far-reaching business growth and supporting the CFO.(increase from 38 employees to over 500 employees)
- Training and professional development of junior data scientists etc.

EDUCATION

Mathematics & Statistics

Postdoctoral Fellowship in Applied
Mathematics and Statistics, Department
of Applied Mathematics and Computer
Science | Weizmann Institute

Ph.D., Department of Statistics | The
Hebrew University | 2012–2016

Specialized in Machine Learning
Thesis Title: "Learning High-Dimensional Copula
Bayesian Networks – Theory and Applications",
supervised by Prof. Gal Elidan

M.Sc. in Statistics | Tel-Aviv University |
2007–2010

Specialized in Model Selection and Data Mining.

B.Sc. in Mathematics | Bar-Ilan University
| 2003–2006

Graduated Cum Laude

Additional Education:

M.A. in Social Psychology | Reichman University
| 2021–2025

EXPERIENCE

Senior Researcher, Lightricks LTD | 2016–2017

Algorithm Engineer and Data Scientist, General Electric Health Care | 2010–2012

- Staff member at G.E. Research, specialized in medical image processing
- Work on CT reconstruction, a project that led to the registration of a patent in the USA (US 8811695 - Adaptive CT image reconstruction on the PACS)

Algorithm Developer of Computer Vision and Machine Learning Systems, Israeli Intelligence Corps, Unit 81 (Captain) | 2006–2012

Developed algorithms based on statistical analyses and inferences of visual data, using C/C++ and DSP (C64) optimization.

PUBLICATIONS

Crowdsourcing Regression: A Spectral Approach, Proceedings of Machine Learning Research (PMLR), 2022

Testing Independence under Biased-Sampling, Y.Tenzer, M.Mandel, O.Zuk, Journal of American Statistical Association, 2022

Beyond Trees: Classification with Sparse Pairwise Dependencies, Y.Tenzer, A.Moscovich, C.Spiegelman, B.Nadler (the Journal of Machine Learning, 2020.

Discovering non-Gaussian Hidden Variables – The Generalized Ideal Parent Approach, Y. Tenzer, I. Slovetich, A. Wiesel, G. Elidan, the proceeding of the International Conference on Artificial Intelligence and Statistics (AISTATS), 2016.

Constraints Based Convex Belief Propagation, Y. Tenzer, K. Gimpel, T. Hazan, the proceeding of the International Conference on Neural Information Processing System (NIPS), 2016.

Efficient Learning of Copula Bayesian Networks, Y.Tenzer, G.Elidan, the Proceeding of the International Joint Statistical Meeting (JSM), 2014.

HELM: Highly Efficient Learning of Mixed Copula Networks, Y. Tenzer, G. Elidan, the proceeding of International Conference on Uncertainty in Artificial Intelligence (UAI), 2014.

Speedy Model Selection (SMS) for Copula Models, Y. Tenzer, G. Elidan, the proceeding of International Conference on Uncertainty in Artificial Intelligence (UAI), 2013.

A Mathematical Model for Extremely Low Dose Adaptive Computed Tomography Acquisition, Y. Tenzer, O. Barkan, A. Averbuch, S. Dekel, Mathematical Models for Curves and Surfaces (MMCS), 2012.

PREPRINTS

Measures of Dependence are Monotonic in One Another, Y.Tenzer, G.Elidan

Betting on Predictions Y.Tenzer, E.Tolochinsky, Y.Romano.

INVITED TALKS

Testing Independence under Biased Sampling – EMR, Jerusalem, 2019

Discovering Hidden Variables in non-Gaussian Domains – Dependence Modeling in Finance, Insurance and Environmental science, Technical University of Munich, 2016

Some New Theoretical Results on Copulas and their Implications – Dependence Modeling in Finance, Insurance and Environmental Science, Technical University of Munich, 2015

Copulas and Machine Learning – Learning Copula Bayesian Networks, Joint Statistical Meeting (JSM), Boston 2014
